## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 21-25 are rejected under 35 U.S.C. 102(a) as being anticipated by Chen et al of record on 1449.

The reference discloses a new route for the design of electroluminescent polymers by grafting high efficiency phosphorescent organometallic complexes as dopants and charge transport moieties onto side chains of fully conjugated polymers for polymer light emitting diodes with single layer/single polymers. The polymer system involves polyfluorene as the base conjugated polymer, carbazole as the charge transport moiety and a source for green emission for forming an electroplex with the PF main chain, and cyclometalated iridium complexes as phosphorescent dopants. Note that the devices prepared can emit the light with broad band containing blue, green and red peaks.

Thus, each and every limitation of the claims is met by the reference.

Note that the Declaration filed under 37 CFR 1.132 has been considered but it is insufficient because the invention was known by others such as Yen-Chun-Chen.

Further, the signature of Yongmin Liang is absent in the Declaration.
